WHAT WE HEARD

A friend's problem, then 200 more

THE COMPLAINT

- A friend back home: sending money is a hassle
- Parents don't know how to receive it
- Conversion fees eat into every transfer

THE SURVEY, 200 OFW COMMUNITY MEMBERS

- 78% send money home every month
- 69% want an automatic payday schedule
- 78% would use wallet-free cash pickup
- 81% want clear proof the money was sent

Source: Bakti community survey, 200 respondents, Filipino overseas workers, 2026

One anchor in the Philippines reaches every market Filipino workers send from

Only the receiving side needs a Stellar anchor. Wherever the sender is, they just need XLM/USDC sitting in their own wallet. Singapore's OFWs alone also account for 7.3% of all 2025 PH cash remittances, the #2 source country after the US.

IN PLAIN TERMS

What Bakti does

Plan the send around payday

Sign it once, yourself

Family picks up PHP cash, no wallet

Money moves on Stellar in between. That's the whole idea.

Plan, sign, and verify on-chain today

TODAY · WORKING

- Freighter + custom signed `manageData` session, not SEP-10
- Support-plan records; reminder day is metadata only
- XLM escrow/release, 60-ledger demo cadence
- Direct XLM/USDC to a recipient address the sender enters and confirms
- Horizon/RPC verification, SEP-7 link, recipient watcher
- Status ends at **Verified on-chain**

NEXT · PLANNED

- Licensed provider onboarding, KYB/compliance, agreements
- SEP-1 + provider SEP-10 + hosted SEP-24
- KYC, quote/limits, approved deposit routing
- Provider transaction status and reference
- PHP cash-out and provider-confirmed collection

ONE SIMPLE FLOW

Sender → Stellar → Anchor → Receiver

Solid border marks what's built today; dashed marks what's still ahead. Once the anchor connects, funds settle through PeraHub's own rails, then flow into their 3,000+ branches across the Philippines. Her mother just needs a reference number and a photo ID to walk out with cash.

One Philippines anchor serves every sending market

ARCHITECTURE

- Only the receiving side needs a Stellar anchor. A sender in the UAE, Saudi Arabia, Singapore, or anywhere else just needs XLM/USDC in their own wallet, bought on any exchange
- No separate integration per sending country, no separate deal per market
- The Philippines is the one place Bakti needs a licensed cash-out partner

CONFIRMED ANCHOR

- PeraHub, the retail brand of PETNET Inc. (BSP-regulated, backed by the UnionBank/UBX PH group, 3,000+ branches nationwide), is listed on Stellar's own anchor directory with SEP-31 support, USDC in, PHP or USD out, cash payout
- SEP-31 is anchor-to-anchor, no wallet required on the recipient's side, a closer technical fit than a hosted webview
- Bakti also emailed MoneyGram Ramps earlier (SEP-24, live in PH since 2021, no reply yet); PeraHub is the better-matched pick, outreach hasn't started

A one-off transfer versus a standing habit with proof attached

Classic apps and bank transfers happen once: no standing plan, no proof beyond a receipt, and the recipient still needs a bank account or a wallet of their own. Bakti skips the wallet requirement on the recipient's side, gives the sender a Stellar transaction they can actually point to, and turns "did I remember this month" into a habit that's already set up. The network layer itself costs next to nothing; what's still missing is the anchor's own cash-out quote.

The same demand, counted in dollars

- The survey's 78% monthly senders, sized in dollars
- TAM \$9.3B: BSP 2025 remittances, 5 confirmed OFW markets
- SAM \$1.6B: cut down by each market's crypto-ownership rate
- SOM \$16M: a 1% target slice for year one or two, a goal

MODEL AND GO-TO-MARKET

Revenue plan and a sequenced launch

BUSINESS MODEL

- 2% sender fee, bundled into the provider's quote
- At SOM's \$16M, roughly \$300K a year
- Later: revenue share with the anchor
- Still open: fee tolerance, provider terms, unit economics

GO-TO-MARKET STRATEGY

- Start with one corridor: Singapore to the Philippines
- Land the PeraHub anchor connection first
- Seed users through OFW community groups
- Expand market by market as crypto access grows

WHERE WE ARE

Phase 1 done, Phase 2 underway

PHASE 1, BUILT AND TESTED

- Mainnet contract live and working well
- Direct payment plus on-chain verification
- Honest boundary: status stops at Verified on-chain

PHASE 2, IN PROGRESS NOW

- Reaching out to PeraHub for early integration
- Found via anchors.stellar.org: SEP-31, Philippines
- Running the product, finding real users
- Awaiting feedback

Contract live on Stellar mainnet since 2026-07-12: CBVAZDK2GAX5MJ7SSSQKRLY33TO7Q6DG3ZGZK6WMZSGI63XRMIR2CTHR, stellar.expert/explorer/public/contract/CBVAZDK2GAX5MJ7SSSQKRLY33TO7Q6DG3ZGZK6WMZSGI63XRMIR2CTHR

The target value, in one line.

A sender signs once a month. Her mother just walks in and picks up cash — no wallet, no app to install, nothing about blockchain to figure out. That part isn't built yet; the anchor connection is what gets us there.
