WHAT WE HEARD

A friend's problem, then 200 more

THE COMPLAINT A friend back home: sending money is a hassle, parents don't know how to receive it, conversion fees eat into every transfer.

THE SURVEY, 200 OFW COMMUNITY MEMBERS OFW = Overseas Filipino Worker

#	QUESTION ASKED	YES	MAPS TO BAKTI
Q1	Send money home every month?	78%	Baseline demand
Q2	Want a fixed schedule tied to payday?	69%	Payday plan + reminder
Q3	Pick up PHP cash with no wallet?	78%	PeraHub cash-out target
Q4	Want a receipt proving it was sent?	81%	On-chain verified record

IN PLAIN TERMS

What Bakti does

**Plan the send around
payday**

Sign it once, yourself

**Family picks up PHP cash,
no wallet**

Money moves on Stellar in between. That's the whole idea.

Plan, sign, and verify on-chain today

TODAY · WORKING

- Freighter + custom signed `manageData` session, not SEP-10
- Support-plan records; reminder day is metadata only
- XLM escrow/release, 60-ledger demo cadence
- Direct XLM/USDC to a recipient address the sender enters and confirms
- Horizon/RPC verification, SEP-7 link, recipient watcher
- Status ends at **Verified on-chain**

NEXT · PLANNED

- Licensed provider onboarding, KYB/compliance, agreements
- SEP-1 + provider SEP-10 + hosted SEP-24
- KYC, quote/limits, approved deposit routing
- Provider transaction status and reference
- PHP cash-out and provider-confirmed collection

ONE SIMPLE FLOW

Sender → Stellar → Anchor → Receiver

Solid border marks what's built today; dashed marks what's still ahead. Once the anchor connects, funds settle through PeraHub's own rails, then reach any of their 3,000+ branches across the Philippines with just a reference number and a photo ID.

One Philippines anchor serves every sending market

CONFIRMED ANCHOR: PERAHUB

- Only the receiving side needs a Stellar anchor; a sender anywhere just needs XLM/USDC in their own wallet
- PeraHub (PETNET Inc., BSP-regulated, UnionBank/UBX PH, 3,000+ branches) is on Stellar's own directory with SEP-31: USDC in, PHP or USD out, cash payout
- SEP-31 needs no recipient wallet, a closer fit than a hosted webview
- Bakti emailed MoneyGram Ramps earlier (SEP-24, no reply); now reaching out to PeraHub directly for SEP-31 integration support

A one-off transfer versus a standing habit with proof attached

Classic apps and bank transfers happen once: no standing plan, no proof beyond a receipt, and the recipient needs a bank account or wallet. Bakti skips that. The sender gets a Stellar transaction to point to, and "did I remember" turns into a habit already set up. This chart is the classic-rail cost stack; Bakti's own total, a 2% fee plus whatever PeraHub charges to cash out, isn't on it, since PeraHub's rate isn't public yet.

The same demand, counted in dollars

TAM, TOTAL MARKET

\$9.3B

SAM, REACHABLE TODAY

\$1.6B

SOM, YEAR-ONE TARGET

\$16M

- TAM: yearly remittances from the 5 biggest sending markets we track
- SAM: the part of that already sent by people who own crypto today
- SOM: 1% of SAM, Bakti's own year-one goal, not a promise

Sources: BSP (Bangko Sentral ng Pilipinas) 2025 remittance data, 5 of 7 corridor markets · Triple-A, State of Global Cryptocurrency Ownership 2024

Revenue plan and a sequenced launch

BUSINESS MODEL

- 2% sender fee, bundled into the provider's quote
- At SOM's \$16M, roughly \$300K a year
- Later: revenue share with the anchor
- Still open: fee tolerance, provider terms, unit economics

GO-TO-MARKET STRATEGY

- Start in Singapore, with senders who already hold crypto, SAM's \$1.6B
- Land the PeraHub anchor connection first
- Seed users through OFW community groups
- Expand market by market as crypto access grows

Phase 1 done, Phase 2 underway

PHASE 1, BUILT AND TESTED

- Mainnet contract live
- Direct payment plus on-chain verification
- App never shows a cash-out status it can't prove

PHASE 2, IN PROGRESS NOW

- Testnet SEP-31 verified: real SEP-10 auth, KYC, and payment intent against Stellar's Anchor Platform
- PeraHub contacted; waiting on a reply

Contract live on Stellar mainnet since 2026-07-12:

stellar.expert/explorer/public/contract/CBVAZDK2GAX5MJ7SSSQKRLY33TO7Q6DG3ZGZK6WMZSGI63XRMIR2CTHR

No wallet, no app, just cash in hand

A sender signs once a month. Their family walks into a branch and picks up cash — nothing to install, nothing about blockchain to learn. That part isn't built yet; the anchor connection is what gets us there.
