THE MOMENT

"I meant to send it. The week got away from me."

ILLUSTRATIVE PERSONA · NOT A CLAIMED INTERVIEW

Linh works a factory shift in Japan, one of over 700,000 Vietnamese on labor contracts abroad. Payday comes; some months she remembers to send money home, some months a double shift pushes it to next week. She wants a standing plan she sets up once, then signs each month on a habit — not from memory.

Her mother has never used a banking app. The real prize isn't the transfer — it's her mother collecting cash without touching a screen. Today the recipient still needs a Stellar address; cash pickup for her mother is the target, not built yet.

Contract workers already send billions home

700,000+

Vietnamese on labor contracts abroad

\$3.5-4B

Remitted by contract workers per
year

\$10.34B

Remittances to HCMC alone, 2025
(+8.3% YoY)

Where the workers are (new deployments, 2024): **Japan 62,722 · Taiwan 48,533 · Korea 10,877** — the three markets Vietnam's labor program has run longest.

No public source breaks HCMC's remittance dollars down by sending country — worker-deployment counts and the Asia-origin remittance total are two different figures, not one TAM. Treat Japan/Taiwan/Korea as a corridor signal, not a market-size claim.

Sources: MOLISA via VietnamPlus/SGGP (2024 deployments) · baochinhphu.vn (HCMC 2025 remittances) · kinhtevadubao.vn (contract-worker remittance total)

Plan, sign, and verify on-chain today

TODAY · WORKING

- Freight + custom signed `manageData` session, not SEP-10
- Support-plan records; reminder day is metadata only
- XLM escrow/release, 60-ledger demo cadence
- Direct XLM/USDC to a recipient address the sender enters and confirms
- Horizon/RPC verification, SEP-7 link, recipient watcher
- Status ends at **Verified on-chain**

NEXT · PLANNED

- Licensed provider onboarding, KYB/compliance, agreements
- SEP-1 + provider SEP-10 + hosted SEP-24
- KYC, quote/limits, approved deposit routing
- Provider transaction status and reference
- VND cash-out and provider-confirmed collection

ONE SIMPLE FLOW

Sender → Stellar → Anchor → Receiver

Solid border = built today. Dashed = planned, not yet connected. The last box is the whole point: once the anchor connects, the receiving side never touches a wallet, an app, or crypto.

Verifiable rails now; the anchor is still a target

Why this customer

- A large, already-counted population on formal labor contracts abroad (see corridor evidence)
- Government-brokered placement → recurring, predictable monthly income
- Japan/Taiwan/Korea are the longest-running, largest programs
- The recipient is often an older parent — the target design ends in cash pickup, not a wallet they'd have to learn

Why these provider candidates

- **Lightnet** — listed on Stellar's own Anchor Directory, Vietnam in its 150+ country coverage, SEP-24, cross-border-payments focus. No live stellar.toml found — unverified today.
- **MoneyGram Ramps** — real, live Stellar anchor. Funds settle to MoneyGram's own Stellar address; the recipient collects cash via phone number/code + ID, no wallet needed on their side. This exact no-wallet pattern already runs in Kenya, Philippines, and Mexico (third-party analysis, chaingain.io — not MoneyGram's own docs) — proven mechanism, Vietnam just isn't on the country list yet.
- Neither is a confirmed partner yet — Bakti is currently reaching out to both.

Cash infrastructure exists. Regulation is catching up.

Cash pickup already works here

- Classic MoneyGram runs cash-pickup agents across Vietnam today — reference number + photo ID, no account needed
- What that alone doesn't give Linh: a standing plan she sets once and on-chain proof it landed, instead of a one-off errand she has to remember and repeat by hand every month

A licensed VND rail is opening

- Vietnam's Resolution 05/2025/NQ-CP (Sep 2025) opened a 5-year regulated crypto pilot — VND-only settlement, up to 5 licensed exchanges
- **CAEX** is a shortlisted candidate, backed by OKX Ventures and HashKey Capital — not a confirmed Stellar anchor

Hypotheses to test — not forecasts

UNVALIDATED BUSINESS MODEL

- Transparent sender service fee within a licensed provider quote
- Provider referral/revenue share where permitted
- Employer, cooperative, or worker-community distribution
- No validated price, take rate, margin, or unit economics

GTM EXPERIMENTS

- Interview Vietnamese contract workers in Japan/Taiwan/Korea and family recipients
- Test planning/reminder value before automation
- Currently reaching out to Lightnet and MoneyGram about a Vietnam VND rail
- Run testnet usability studies for signing and address safety
- Seek provider sandbox/certification conversations, no partnership claim

A working mainnet core, with an honest last-mile gap

BUILT

- Contract itself: live on mainnet since 2026-07-12 — creator key under review
- Separately: a fresh, judge-facing demo transaction is pending, to be signed before submission
- Direct payment verification and support-plan UI
- Current endpoints stop at Verified on-chain

ASK

- Warm introduction to Lightnet or MoneyGram about a Vietnam VND rail
- Customer-discovery introductions among Vietnamese worker communities in Japan/Taiwan/Korea
- Feedback on the planning job before adding automation

Not built: SEP-24, anchor API/webview, KYC, provider routing/status/reference, VND cash-out, automatic scheduling.

The target value, in one line.

A sender signs once a month. Her mother walks in and collects the cash — no wallet, no app, no blockchain to learn. That last part isn't built yet; it's what the anchor connection is for.
