

Bakti

Plan salary-day support. Verify the transfer.

Filipino workers in Malaysia → family in the Philippines

Stellar mainnet product

Non-custodial signing

Licensed cash-out: next integration

bakti-stellar.vercel.app · Stellar APAC Hackathon 2026 · Track A

HUMAN PROBLEM / TARGET PERSONA

"I want support to be ready around salary day."

ILLUSTRATIVE PERSONA • NOT A CLAIMED INTERVIEW

Maria is a Filipino service worker in Kuala Lumpur. She wants to set aside support for her mother, remember the commitment, and know where the transfer went.

Job: make family support intentional, legible, and verifiable.

Today Maria still needs her mother's Stellar address and signs every transfer. Bakti does not send automatically.

CORRIDOR EVIDENCE

A large national flow, with a measured Malaysia signal

Philippines cash remittances
2025 preliminary

US\$35.634B

Malaysia-attributed
2025 provisional

**US\$675.153
M**

Jan-May 2026 already US\$279.807M Malaysia-attributed cash. Signal, not TAM — BSP source-country attribution reflects the immediate source of funds, not necessarily true origin.

Plan, sign, and verify on-chain today

TODAY · WORKING

- Freighter + custom signed `manageData` session, not SEP-10
- Support-plan records; reminder day is metadata only
- XLM escrow/release, 60-ledger demo cadence
- Direct XLM/USDC to entered recipient address
- Horizon/RPC verification, SEP-7 link, recipient watcher
- Status ends at **Verified on-chain**

NEXT · PLANNED

- Licensed provider onboarding, KYB/compliance, agreements
- SEP-1 + provider SEP-10 + hosted SEP-24
- KYC, quote/limits, approved deposit routing
- Provider transaction status and reference
- PHP cash-out and provider-confirmed collection

ONE SIMPLE FLOW

Solid is current. Dashed is planned.

Sender (Malaysia) → Bakti plan → Stellar (direct payment or XLM escrow) → Recipient wallet

Planned Provider-approved deposit → licensed anchor → KYC → PHP cash-out → family member

Verifiable rails now; regulated last mile next

Why Stellar for this prototype

- Freighter keeps signing with the sender
- Horizon and Soroban RPC make transfers inspectable
- Soroban demonstrates pre-funded XLM release rules
- Anchors define how Stellar assets connect to off-chain rails
- SEP-24 is hosted and interactive — anchor auth + KYC required

MoneyGram Ramps as a target path

- Not a Bakti partner or current feature
- Requires allowlisting, SEP-1/10/24, KYC, KYB, agreements
- Malaysia + Philippines both cash-out only — no MY cash-in route today

\$2,500

Documented + live-API

max

\$20

Actual cert-tier cap

today (\$100 total)

Hypotheses to test — not forecasts

UNVALIDATED BUSINESS MODEL

- Transparent sender service fee within a licensed provider quote
- Provider referral/revenue share where permitted
- Employer, cooperative, or worker-community distribution
- No validated price, take rate, margin, or unit economics

GTM EXPERIMENTS

- Interview Filipino workers in Malaysia and family recipients
- Test planning/reminder value before automation
- Map compliant Malaysia funding and Philippines payout partners
- Run testnet usability studies for signing and address safety
- Seek provider sandbox/certification conversations, no partnership claim

A working mainnet core, with an honest last-mile gap

BUILT

- Deployed on mainnet, creator key under review
- Mainnet release transaction: pending, to be signed before submission
- Direct payment verification and support-plan UI
- Current endpoints stop at Verified on-chain

ASK

- Anchor review: confirm third-party cash pickup (no recipient wallet/KYC) and a Malaysia MYR on-ramp path
- Customer-discovery introductions in Malaysia
- Feedback on the planning job before adding automation

Not built: SEP-24, MoneyGram API/webview, KYC, provider routing/status/reference, PHP cash-out, automatic scheduling.

Thank you.
