

A monthly allowance your parents collect as cash.

Stellar APAC Hackathon 2026 · Track A

You sign one Stellar payment a month. They walk into a pickup point and take home local money — no wallet, no crypto on their side.

Standardized cash off-ramp

THE MOMENT

"I always meant to send money to Ayah."

Dewi is a caregiver from Indonesia, working in Singapore.

Some months she remembers to send money home. Some months — between double shifts — it slips away.

When she forgets, her father stretches his medicine.

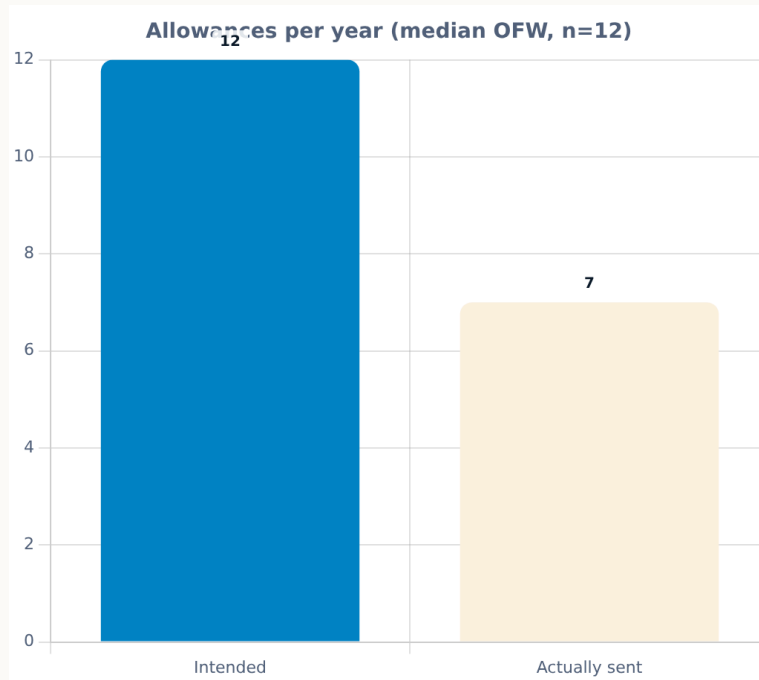

He doesn't use crypto. He uses the corner pickup shop.

Dewi doesn't want a transfer. She wants a standing allowance she can trust to land every month.

Bakti

THE PROBLEM

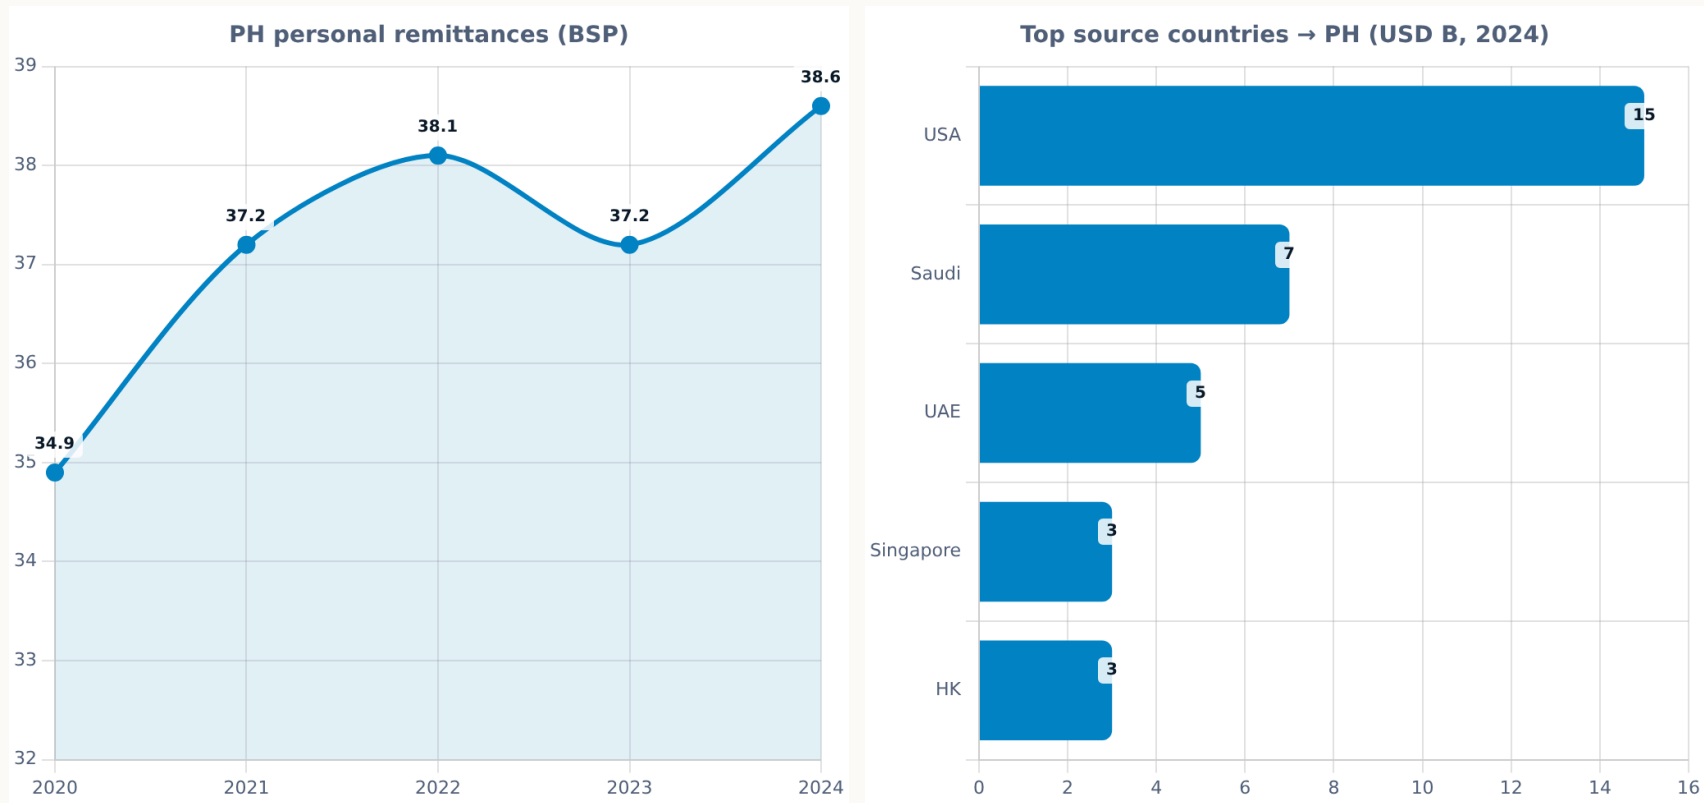

Remittances reach wallets. They don't reach habits.

- SEA diaspora sends **>\$100B** home each year — much of it children supporting elderly parents
- Ad-hoc: depends on the sender remembering in a busy month
- Apps charge opaque fees; no clean audit of what landed
- A missed month = skipped medicine or groceries

Source: World Bank Migration & Remittances data (KNOMAD, 2024)

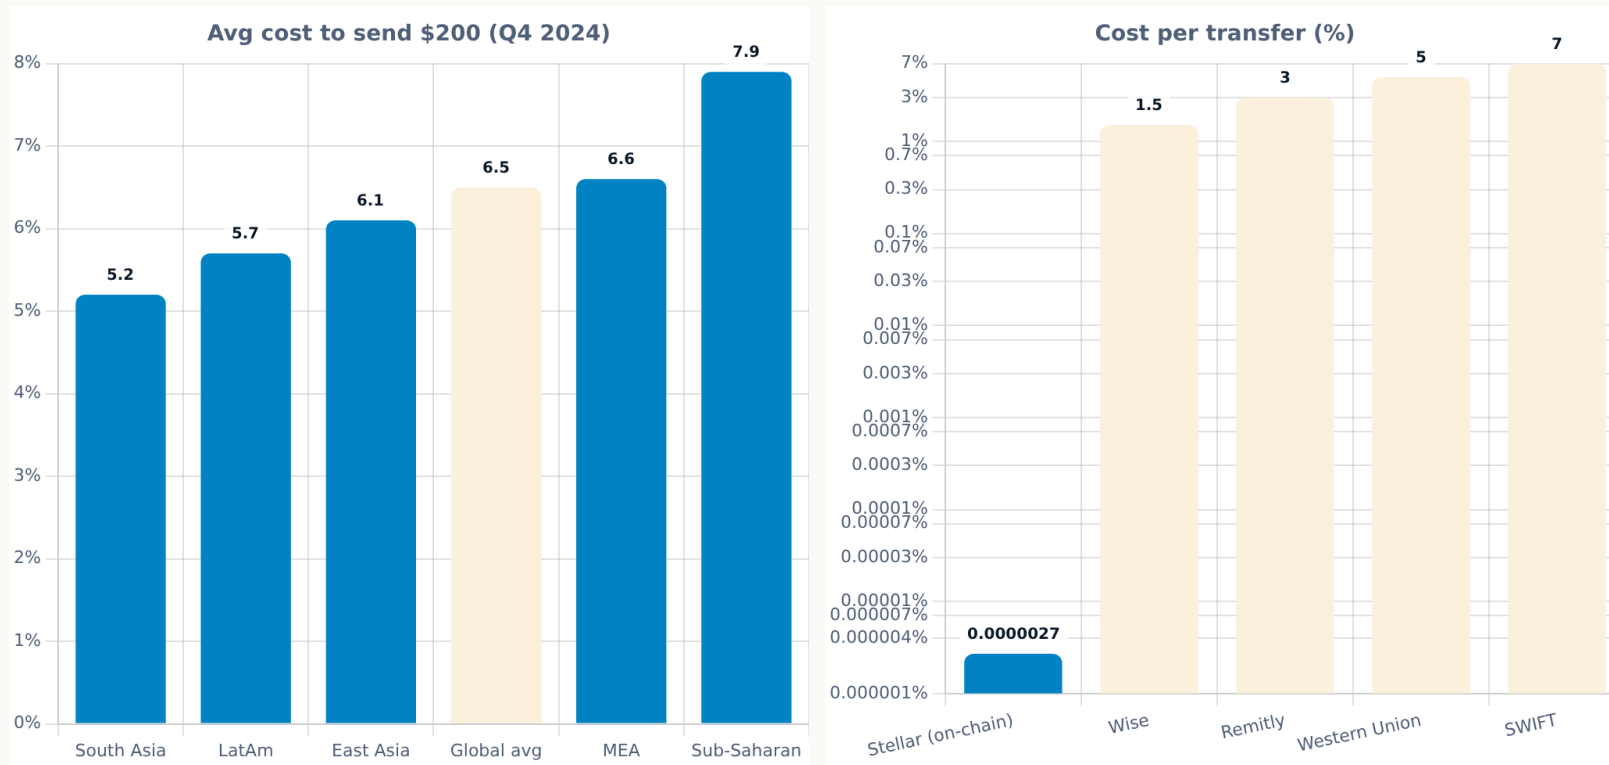

Philippines remittances — \$38.6B (2024)

Source: Bangko Sentral ng Pilipinas (2024); +3% YoY

WHY IT COSTS SO MUCH

6.5% global avg — a \$25 allowance loses \$1.63 to fees

Sources: World Bank RPW (Q4 2024) · stellar.org/developers

SOLUTION

Standing allowance. Local cash. Fixed day.

1 · Add a parent	2 · Sign the month	3 · Anchor off-ramps	4 · They collect
Name, Stellar address, corridor, amount, payout day	One XLM or USDC payment, signed in your own wallet	Cash-pickup reference issued (SEP-24, simulated anchor today)	Local cash in hand — no wallet, no crypto on their side

Non-custodial the whole way — Bakti never holds your keys or your funds.

Dewi → Soroban BaktiEscrow (releases monthly) → SEP-24 Anchor → Cash pickup

The only chain where the last mile ends in cash.

Phase 1 shipped. Phase 2 is one anchor away.

Phase 1 — shipped

- Soroban BaktiEscrow on mainnet
- Non-custodial signing
- Signed-challenge auth (not SEP-10) · SEP-23 / SEP-7 wired
- SEP-24 `cash_pickup`, simulated anchor
- Payout proven end-to-end on testnet

Phase 2 / 3 — target

- Anchor: **MoneyGram Access** or **Coins.ph**
- Config swap, not a rewrite
- Real 30-day cadence
- Multi-corridor, licensed rails

What's real today: contract, app, every signed payment — all on Stellar mainnet.

THE ASK

Pilot an anchor. Open one corridor.

Pilot SEP-24 anchor (cash_pickup)
