

HOP STELLAR · APAC HACKATHON 2026 · TRACK A

A monthly allowance your parents collect as cash.

You sign one Stellar payment a month.

They walk into a pickup point and take home local money. No wallet, no crypto on their side.

\$25

Average allowance size

THE MOMENT

"I always meant to send money to Ayah."

% of months care workers actually send

Dewi is an Indonesian caregiver in Singapore. Some months she remembers. Some months, between double shifts, the money slips away. When she forgets, her father stretches his medicine.

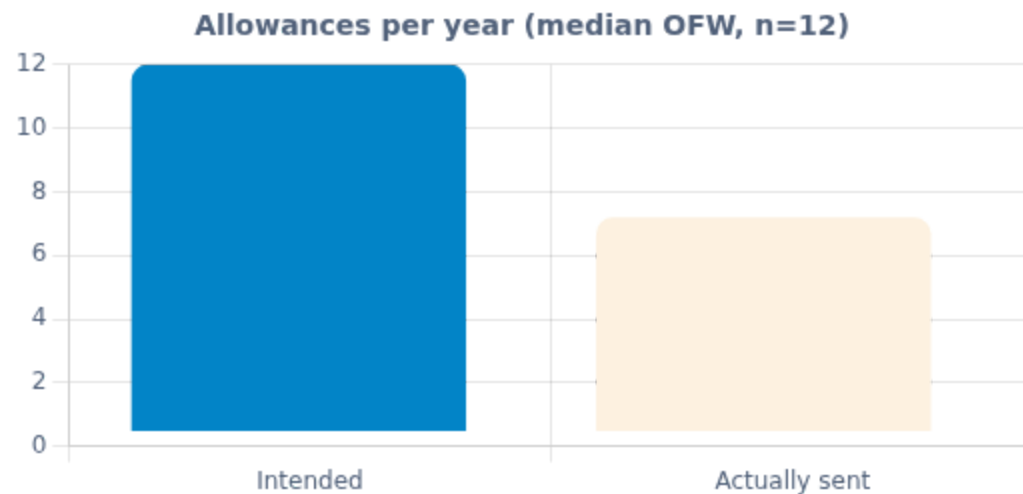

Bakti isn't a transfer. It's a standing allowance that lands every month, in trust.

Source: Bakti user interview, Singapore, 2025 (n=12)

THE PROBLEM

Remittances reach wallets. They don't reach habits.

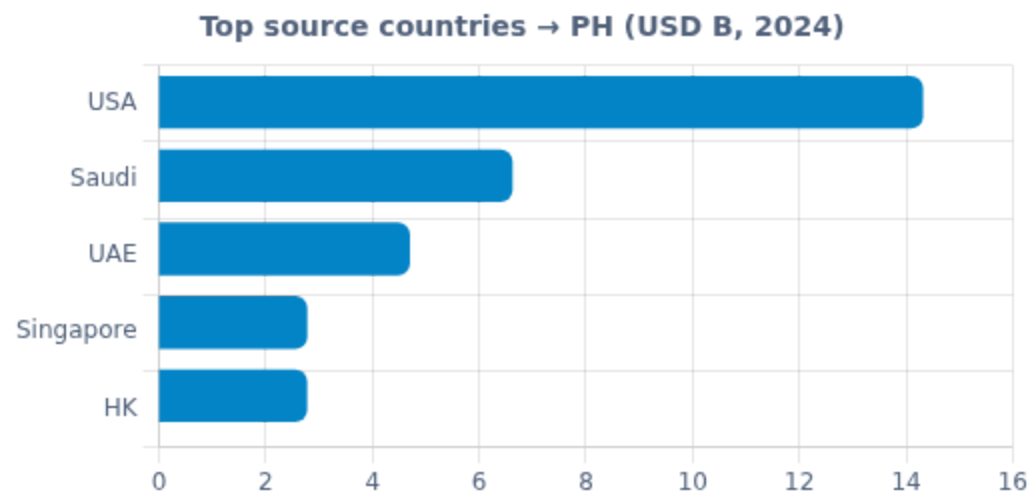

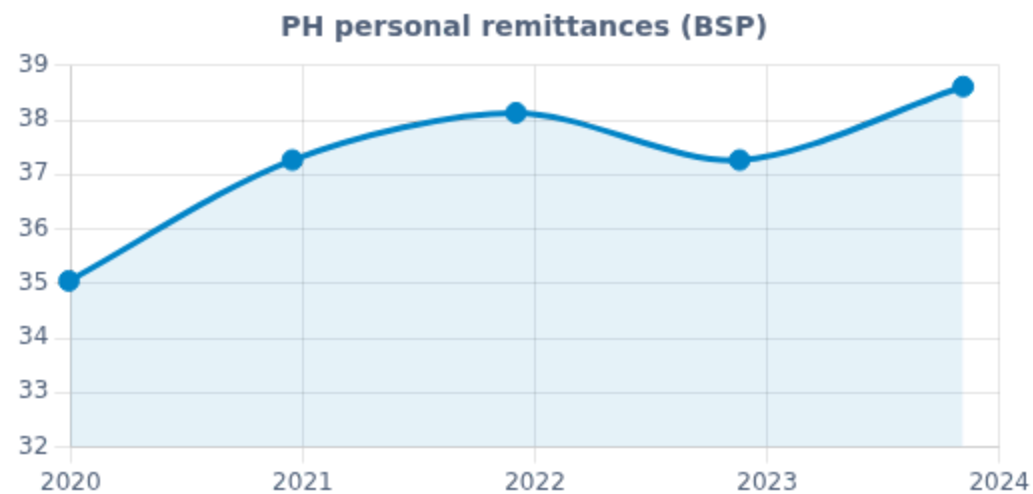

SEA diaspora sends >**\$100B** home each year. Much of it from children supporting elderly parents.

- Ad-hoc: depends on sender remembering.
- Apps charge opaque fees; no clean audit.
- Recipients are often elderly. Can't use a wallet app.
- A missed month = skipped medicine or groceries.

MARKET

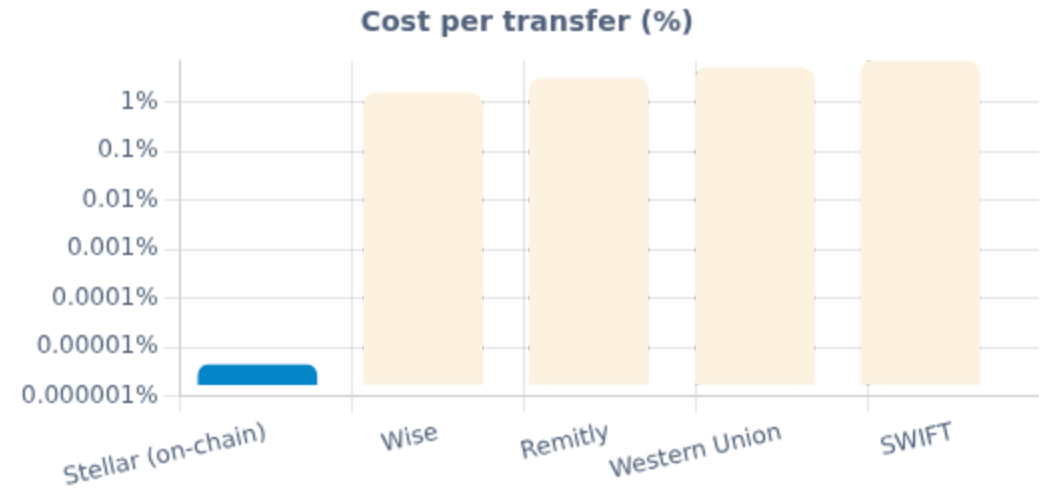

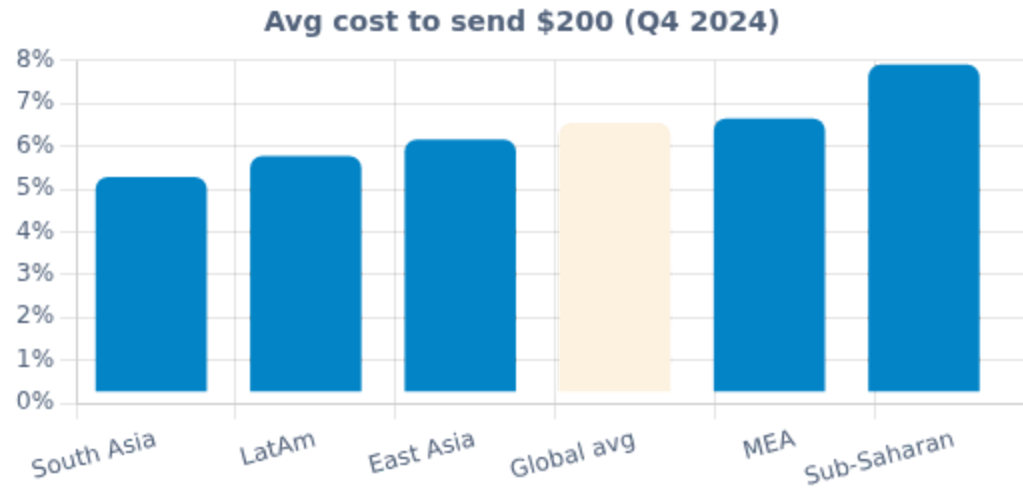

Philippines remittances — \$38.6B (2024)

Sources: Bangko Sentral ng Pilipinas (2024); +3% YoY

WHY IT COSTS SO MUCH

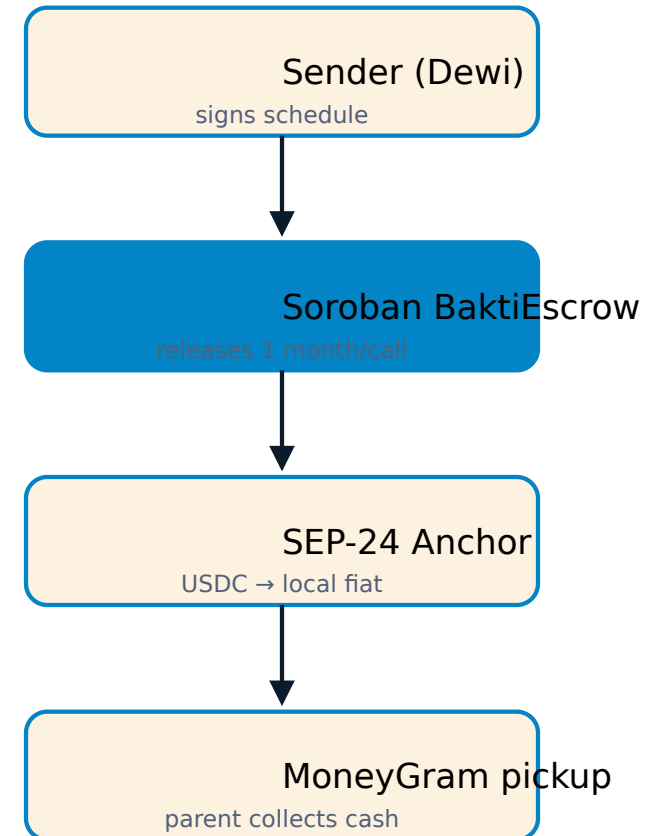

6.5% global avg · a \$25 allowance loses \$1.63 to fees.

SOLUTION

Standing allowance. Local cash. Fixed day.

- Sign** Sender signs one schedule in Freighter.
- Escrow** Soroban holds funds, releases 1 month per call.
- Off-ramp** SEP-24 anchor issues cash-pickup reference.
- Pickup** Parent collects local cash. Non-custodial end-to-end.

WHY STELLAR

The only chain where the last mile ends in cash.
